

EVAPORATIVE COOLING MEDIA

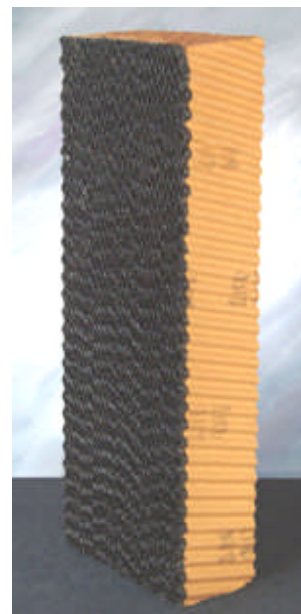

for

LIVESTOCK CONFINEMENT

Kool Pack's "Black-Edge" Coated Evaporative Cooling Media is designed to handle the operating conditions of Intensive Pig Farming. Because temperature regulation is so important to pig production, **Kool Pack** leads the way in reducing temperatures. Pigs, like chickens, don't sweat and need to be "air cooled." Because pigs have a limited tolerance for high temperatures it is important to maintain cool temperatures for pig growth ranges. Proper temperature maximizes growth and growth to feed ratios. **Kool Pack's "Black-Edge"**

Coated Media Pads' superior cooling properties provide more even water distribution and cooling to your farm, and its protective coating keeps minerals and algae from attaching themselves. Cooling Pads from **Kool Pack** not only keep your lactating sows comfortable, but also keep weaning weights high leading to better slaughter weights down the line. **Kool Pack** means high cooling efficiency for swine production.
